

## Suggested Literature for In-Depth Study of the Holy Scriptures

Some students have the view that they can entirely understand the Scriptures without reference to any scholarly works or perhaps only to one or two, such as Strong's concordance. This approach has often led to false understandings because insufficient up-to-date information has been applied to the studies of the Scriptures. For example, with limited information some individuals or organizations have placed their followers under tithing systems which have brought many members to desperate poverty. Others have placed their members into unnecessary life or death situations or situations that waste huge amounts of time for no real Christian purpose. Yet others have insisted that some members remain in intolerable marital situations.

As an illustration of why it is beneficial for Christians to use up-to-date scholarly works we may refer to court cases where either the judge or a lawyer will call for "expert" witnesses. These "experts" will be the individuals who have a very great amount of knowledge and experience in, for example, forensics or post mortems or air crash investigation or in how fires may have been started etc. Some "expert" witnesses may even contradict others so once the judge and the jury have taken in the testimony from these "experts" they must filter it through all other information given regarding the case. Then they must weigh up everything they know pertaining to the particular case and come to a conclusion. In this way they can come to a much better decision than they otherwise would have if "expert" witnesses had not been called. This is also true regarding biblical studies. When one has access to the works of the best of the scholars and the work of those who have deciphered the multiplicity of archaeological finds relevant to biblical research, then one can considerably improve ones understanding of the Scriptures. For this reason the following suggested literature and DVDs are listed:
